

Manage Project

Manage project is a set of tools for efficient management of a Revit project.

Warning Handler
Project Cleanup
CAD Tracker
View Filter Manager
Parameter Configuration
Basepoint Explorer
Basepoint Export

Tools included are:

Warning Handler - correct warnings in Revit projects.

Project Cleanup - clean-up your project from unnecessary views, sheets, and other categories in order to improve performance and reduce file size.

CAD Tracker - keep track of .cad files in your project. The function detects .dwg, .dxf and .dgn files.

View Filter Manager - lists all View Filters contained in the project with information about which Views and View Templates these filters are used in.

Parameter Configuration - tool for configuration of parameters that will be used to write data for selected tools

Basepoint Explorer - tool for importing and managing all shared coordinate systems in host and linked project

Basepoint Export - tool for exporting of basepoint data to Excel Spreadsheet.
