

Basepoint_Export

Basepoint Export is a tool for exporting of basepoint data to Excel Spreadsheet. The tool exports all shared coordinate systems in host and linked projects.

The workflow is very simple:

1. Run Manage Project/Basepoint Export,
2. Chose a location where you want the excel file to be saved,
3. The file will open automatically after saving:

Notes and Tips:

You can import coordinate systems from linked files using the [Basepoint Explorer](#) tool.
